Quality without Compromise

**TECO CHEMICALS PARTICIPATES IN THE
MARINERS-ATPI GO GREEN GOLF CLASSIC 2023**
*An Afternoon of Golf Dedicated to Commemorating Sustainability
and Decarbonization for the Marine Community in Singapore*

(SINGAPORE, 15 May 2023) TECO Chemicals was proud to participate in the **Mariners-ATPI Go Green Golf Classic 2023** held at the Singapore Island Country Club on 12 May 2023 for an enjoyable afternoon of golfing prowess. This annual event is organized by the Mariners Cricket Club Singapore and supported by ATPI and the Singapore Shipping Association. It brings together avid golfers from the maritime industry in Singapore for an event that signifies the community's commitment to accelerate the implementation of sustainable practices in shipping and inspire the pursuit of decarbonization.

Represented by Managing Partner, Mr Gaurav Saini for the second year running, this edition saw TECO Chemicals championing the event as a Gold Sponsor supported also by sister organization TECO 2030 of Norway. Both organizations contributed keepsake tokens including branded sports caps and golf balls for all participants. With 36 flights and more than 100 players in attendance, the event showcased countless moments of camaraderie amongst the community, bouts of friendly competition on the green as well as some thrilling moments of action and skill. With the tee-off dedicated to going plastic-free for a greener tomorrow, conversations were sparked amongst like-minded industry leaders, looking towards a more sustainable future and pledging to adopt more environmentally friendly initiatives.

Says Mr Saini, "Shipping currently accounts for 90% of international trade and global shipping volumes consistently show an impressive upward trajectory. Innovation, sustainability and green technology will be the cornerstones of the future. TECO Chemicals continues to pave the way forward with an aim to achieving climate neutrality and net zero emissions and events such as these allow the community to come together not just to socialize but also to discuss how we can support the industry towards accomplishing these goals. We at TECO Chemicals are honoured to be associated with this prestigious and meaningful initiative."

About TECO Chemicals: TECO Chemicals is a specialized supplier of IMO-2020 compliant marine chemicals, cleaning chemicals for tankers and bulkers, remote cleaning consultations, supercargo services and equipment for tank and cargo hold cleaning: operating successfully since 1994. Chemicals supplied are of exceptional quality, tank-coating manufacturer approved and in line with MARPOL regulations from its stocks and production facilities worldwide.

With the implementation of IMO-2020 regulations for emissions, TECO Chemical also serves its clients with Caustic Soda 50% solution for use in scrubbers, Urea 40% solution for SCR use and other chemicals or raw materials required for Ballast Water Treatment Systems or for marine cleaning. Our deliveries are from barge, truck or IBC containers, by certified personnel and approved equipment, always in line with local rules and regulations to ensure safety and cost effective operations for our clients. The revolutionary TECO onboard Urea Generator directly impacts efficiency, cost and regulatory emissions compliance.

TECO Chemicals is part of TECO Maritime Group-supplying products along with providing repair and maintenance services to the international maritime industry. The entities within the group provide a vast array of products and services to the maritime, offshore and onshore industries, thus assisting many of the largest international ship owners and operators globally
